

HIPAA-secured transfer portal for Clear Billing.

Open **prism.clearbillingservices.com** on any phone, tablet, or computer. Sign in with your invited work email and login code, accept the PHI screen, then pick how you want to work.

1. Sign in - invited work email + login code. Session lasts 8 hours. (desktop screenshot · synthetic data, not a live example)

2. Add Case - enter cases through the day as you finish them. Upload demographics later; they match by MRN. (desktop screenshot · synthetic data, not a live example)

3. Or Upload PDF - drop a bulk handwritten packet (charges + demos) here instead of email or other less-safe channels. (desktop screenshot · synthetic data, not a live example)

Built for HIPAA handoff, without the enterprise bill

HIPAA does not "certify" apps. What matters is a real program: BAAs, policies, workforce training, and live technical safeguards. Prism is the practice-to-Clear Billing transfer channel inside that program, subsidized for current practices. Generic portals and DIY cloud stacks often land at hundreds to thousands a month after identity, audit, storage, and support.

CONTROL	WHAT PRISM / CLEAR BILLING RUNS LIVE
Edge Zero Trust	Cloudflare Access sits in front of Prism. Uninvited visitors never reach the app UI. Sign-in uses your invited work email and a single-use login code.
Allowlisted identity	Clear Billing allowlists practice emails before Access will issue a code. Unknown addresses are blocked. No shared "office password." Offboarding removes that email from the invite list.
Time-boxed sessions	Access sessions last 8 hours , then a fresh code is required. Out clears the Access session so the next visit is not a silent re-entry.
Encrypted transport	All browser traffic is HTTPS with HSTS. Prism is reached through a Cloudflare Tunnel; the app is not port-forwarded on the public internet or left open on an office LAN.
Browser hardening	Security headers on the app responses (frame deny, nosniff, referrer policy, content-security posture) reduce clickjacking and drive-by embedding risk.
PHI acknowledgment	Providers must accept a PHI security screen before working. That acknowledgment is stored with the account.
Practice separation	Each practice only sees its own cases and uploads. Vault paths and API calls are scoped to the signed-in practice.
PHI hygiene	Cases and PDFs go into Prism's vault. Confirmation emails carry no PHI . Patient charts are not offered as downloads back to personal phones or laptops.
Audit & backups	Sign-in and intake activity are logged for ops review. Hosted storage includes routine backups on Clear Billing's dedicated host path (power, uplink, and backup covered in the fee).
Safer than email / Drive	No PHI sitting in shared inboxes, group chats, or broad "anyone with the link" folders. Handoff stays in one gated channel instead of forwarded PDFs and photo texts.

WHY \$49 / MONTH
\$49 / month per practice

Similar secure-transfer stacks with identity, hosting, audit, and support commonly land in the \$200-\$800+ / month range. Prism is subsidized for current Clear Billing practices.

Covers the Prism app, secure login, PHI screen, maintenance, dedicated hosting, power, uplink, and backups, so handoff stays in one place instead of email and texts.
